Infiltration Repairs

The waste water department has identified areas that are contributing to the infiltration of rain water into the treatment plant. On an annual basis we bring in cleaning and video trucks to identify areas of concern. After doing the video work this year we found a manhole and crack in a pipe along the river that have I&I. I've asked Alan to obtain quotes to repair those locations with the river location being a prime opportunity for removal of inflow. I'd recommend both contracts and we will utilize our depreciation funds in the Waste Water department to pay for these items.
